

Regulations Governing the Fitting of Solid Fuel Appliances

All solid fuel appliances by law have to be fitted to comply with Part J of The Building Regulations, by a Hetas qualified engineer or if you fit it yourself you will need to apply to Building Control which will cost from approximately £60 - £200 subject to the cost of installation. In both cases a Certificate of Compliance will be issued which you will need if you sell the property.

We have been informed by the Insurance Industry that if the appliance is illegally fitted and it causes a fire, your insurance could be invalid.

Dean Forge has its own team of 'in-house' Hetas engineers. We will survey, advise and fit your appliance, and service it in the future.
